Reid,

It seems as though during hot weather the track becomes looser. I felt that if we could have watered and used the track master harrows between races that this would have helped. Currently we are having trouble with the trainers, understanding this. The fact that polytrack has advertised their track as being maintenance free, the trainers have it in their head that we should leave the track alone. Mr. Harper of Cushion Track has told us from day one that we would have to perform maintenance on the track. Paul Harper believes as I do, that you have to adjust your maintenance for the weather conditions that your racing or training under.

As far as what we did on Wednesday it was the same maintenance that you seen us perform during your visit. Harrow, Compact, Water, and Harrow.

Thanks,
Dennis

Dennis,

Firstly I would like to thank you for the time you spent with both myself and Mr Bob Bentley. I appreciate that race days are very busy and the time you gave to us was very informative and honest.

I noticed on the weather channel that you had extreme heat yesterday (Wednesday). I was wondering if you could provide any feedback on how the "Cushion Track" raced and performed under such hot conditions. Did you change your maintenance in anyway given that it was so hot. If you are able to advise of your opinion on the tracks performance that would be great.

Your feedback would be greatly appreciated as I'm starting to collect as much information as I can on the performance and maintenance on the "Cushion Track" for our staff following the installation of our track.

Thanks

Reid Sanders
